Item 2.02 Results of Operations and Financial Condition.

On August 8, 2016, Tonix Pharmaceuticals Holding Corp. (the "Company") announced its operating results for the second fiscal quarter ended June 30, 2016. A copy of the press release that discusses this matter is filed as Exhibit 99.01 to, and incorporated by reference in, this report. The information in this Current Report is being furnished and shall not be deemed "filed" for the purposes of Section 18 of the Securities Exchange Act of 1934 or otherwise subject to the liabilities of that Section. The information in this Current Report shall not be incorporated by reference into any registration statement or other document pursuant to the Securities Act of 1933, except as shall be expressly set forth by specific reference in any such filing.

Item 7.01 Regulation FD Disclosure.

The Company intends to utilize an updated investor presentation to conduct meetings with investors, stockholders and analysts and at investor conferences, and which the Company intends to place on its website, which may contain non-public information. A copy of the presentation is filed as Exhibit 99.02.

The information contained in Item 7.01 of this Current Report on Form 8-K, including Exhibit 99.02, is furnished pursuant to, and shall not be deemed to be "filed" for the purposes of, Section 18 of the Securities Exchange Act of 1934, as amended, or otherwise subject to the liabilities of that section. The information contained in Item 7.01 of this Current Report shall not be incorporated by reference into any registration statement or any other document filed pursuant to the Securities Act of 1933, as amended, except as otherwise expressly stated in such filing. By filing this Current Report on Form 8-K and furnishing the information contained in this Item 7.01, including Exhibit 99.02, the Company makes no admission as to the materiality of any such information that it is furnishing.

Item 9.01 Financial Statements and Exhibits.

(d) Exhibits.

99.01 Press release, dated August 8, 2016, issued by Tonix Pharmaceuticals Holding Corp.*

99.02 Corporate Presentation by the Company for August 2016*

* Furnished herewith.

SIGNATURE

Pursuant to the requirement of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

Tonix Pharmaceuticals Reports Second Quarter 2016 Financial Results and Provides Programs Update

First Phase 3 Study of TNX-102 SL in Fibromyalgia to Report Topline Results in September

NEW YORK, Aug. 8, 2016 – Tonix Pharmaceuticals Holding Corp. (Nasdaq:TNXP) (Tonix), which is developing next-generation medicines for fibromyalgia and post-traumatic stress disorder (PTSD), announced financial results for the second quarter ended June 30, 2016.

“Our late-stage programs gained significant momentum in the second quarter. We completed enrollment in our flagship Phase 3 fibromyalgia trial, AFFIRM, for which we plan to report topline data in September. AFFIRM, which enrolled 519 fibromyalgia patients, is a randomized, double-blind placebo-controlled study of TNX-102 SL (cyclobenzaprine HCl sublingual tablets), 2.8 mg, dosed at bedtime over twelve weeks. Also, during the second quarter, we reported positive results from our Phase 2 AtEase study of TNX-102 SL in military-related PTSD. The data supports that TNX-102 SL, 5.6 mg, is an effective and well tolerated dose in this population. These findings support the advancement of TNX-102 SL, 5.6 mg, for PTSD Phase 3 development,” said Seth Lederman, M.D., president and chief executive officer of Tonix. “Our key focus for the third quarter is on our fibromyalgia program, highlighted by the upcoming announcement of topline data from our first Phase 3 AFFIRM study in September, and the ongoing enrollment in our recently initiated second Phase 3 RE-AFFIRM study.”

Tonix ended the June 30, 2016 quarter with \$31.2 million in cash and cash equivalents and marketable securities, as compared to \$27.5 million as of March 31, 2016. During the quarter ended June 30, 2016, Tonix raised approximately \$11.8 million in net proceeds from an underwritten offering and through an at-the-market offering. In July 2016, Tonix raised approximately \$1.4 million in net proceeds from the fully exercised over-allotment of the underwritten offering.

Recent Clinical Highlights and Upcoming Milestones

TNX-102 SL – Fibromyalgia Program

- Recently completed the clinical phase of the first Phase 3 AFFIRM study.
- Scheduled to report topline results from the AFFIRM study in September.
- Initiated a second Phase 3 RE-AFFIRM clinical study, which is expected to enroll approximately 500 patients at approximately 35 clinical centers in the U.S.
- Presented encouraging results from a retrospective analysis on the Phase 2b BESTFIT clinical study that demonstrated improvements in multiple domains of fibromyalgia including sleep, pain, and physical function.

Fibromyalgia is a chronic neurobiological disorder that is thought to result from amplified sensory and pain signaling. Fibromyalgia afflicts five to 15 million Americans, and physicians and patients report widespread dissatisfaction with currently marketed products. Common symptoms of fibromyalgia include chronic widespread pain, nonrestorative sleep, fatigue, and morning stiffness. Other associated symptoms include cognitive dysfunction and mood disturbances, including anxiety and depression. Individuals suffering from fibromyalgia struggle with their daily activities, have impaired quality of life, and frequently are disabled.

TNX-102 SL – PTSD Program

- Presented positive results from the Phase 2 AtEase clinical study demonstrating that a 5.6 mg dose is effective and well tolerated for treating military-related PTSD.
- AtEase was the first large, multicenter, adequate well-controlled study that showed promising results with an Investigational New Drug to treat military-related PTSD.
- Phase 3 clinical study, employing a trial design similar to AtEase, is expected to begin enrollment in the first quarter of 2017.

PTSD affects approximately 8.5 million Americans and is a chronic and debilitating condition, in which patients experience nightmares and disturbed sleep, and which is associated with depression and suicide. Individuals who suffer from PTSD experience impaired social functioning, occupational disability, intense anxiety and avoidance, emotional numbness, intense guilt or worry, agitation and an overall poor quality of life. PTSD is sometimes associated with substance abuse and unpredictable or violent behaviors, additional reasons that make it a critical public health concern. PTSD can develop from witnessing or experiencing a traumatic event or ordeal in which there was the threat or actual occurrence of grave physical harm.

TNX-102 SL is an Investigational New Drug and has not been approved for any indication.

Second Quarter Financial Results

Tonix reported a net loss of \$9.8 million, or \$0.50 per share, for the second quarter of 2016 compared to a net loss of \$11.8 million, or \$0.73 per share, for the second quarter of 2015. Net loss for the three months ended June 30, 2016, excluding non-cash expenditures of \$0.8 million, was \$9.0 million, as compared to a net loss of \$10.6 million, excluding non-cash expenditures of \$1.2 million, for the three months ended June 30, 2015. The lower net loss was primarily due to decreased research and development expense for clinical studies and related research, as well as lower general and administrative expense needed to support these and other corporate development activities.

Tonix reported a net loss of \$23.8 million, or \$1.23 per share, for the six months ended June 30, 2016 compared to a net loss of \$21.4 million, or \$1.44 per share, for the six months ended June 30, 2015. Net loss for the six months ended June 30, 2016, excluding non-cash expenditures of \$1.7 million, was \$22.1 million, as compared to a net loss of \$18.8 million, excluding non-cash expenditures of \$2.6 million, for the six months ended June 30, 2015. The higher net loss was primarily due to increased research and development expense during the first quarter of 2016 for clinical studies and research related to TNX-102 SL, as well as higher general and administrative expense needed to support these and other corporate development activities.

Cash used in operations was \$8.0 million and \$23.5 million for the three and six months ended June 30, 2016, respectively, as compared to \$9.2 million and \$18.3 million for the three and six months ended June 30, 2015, respectively. At June 30, 2016, Tonix's cash, cash equivalents and marketable securities totaled \$31.2 million compared to \$43.0 million at December 31, 2015. Management believes that Tonix's existing funds are sufficient to fund its operating expenses and ongoing clinical trials for at least the next 12 months.

About Tonix Pharmaceuticals Holding Corp.

Tonix is developing next-generation medicines for common disorders of the central nervous system, including fibromyalgia and PTSD. These disorders are characterized by chronic disability, inadequate treatment options, high utilization of healthcare services, and significant economic burden. This press release and further information about Tonix can be found at www.tonixpharma.com.

Forward Looking Statements

Certain statements in this press release are forward-looking within the meaning of the Private Securities Litigation Reform Act of 1995. These statements may be identified by the use of forward-looking words such as “anticipate,” “believe,” “forecast,” “estimate,” “expect,” and “intend,” among others. These forward-looking statements are based on Tonix’s current expectations and actual results could differ materially. There are a number of factors that could cause actual events to differ materially from those indicated by such forward-looking statements. These factors include, but are not limited to, substantial competition; our possible need for additional financing; uncertainties of patent protection and litigation; uncertainties of government or third party payor reimbursement; limited research and development efforts and dependence upon third parties; and risks related to failure to obtain FDA clearances or approvals and noncompliance with FDA regulations. As with any pharmaceutical under development, there are significant risks in the development, regulatory approval and commercialization of new products. Tonix does not undertake an obligation to update or revise any forward-looking statement. Investors should read the risk factors set forth in the Annual Report on Form 10-K for the year ended December 31, 2015, as filed with the Securities and Exchange Commission (the “SEC”) on March 3, 2016, and future periodic reports filed with the SEC on or after the date hereof. All of Tonix’s forward-looking statements are expressly qualified by all such risk factors and other cautionary statements. The information set forth herein speaks only as of the date hereof.

Cautionary note on forward-looking statements

2

Certain statements in this presentation regarding strategic plans, expectations and objectives for future operations or results are "forward-looking statements" as defined by the Private Securities Litigation Reform Act of 1995. These statements may be identified by the use of forward-looking words such as "anticipate," "believe," "forecast," "estimate," and "intend," among others. These forward-looking statements are based on Tonix's current expectations and actual results could differ materially. There are a number of factors that could cause actual events to differ materially from those indicated by such forward-looking statements. These factors include, but are not limited to, substantial competition; our possible need for additional financing; uncertainties of patent protection and litigation; uncertainties of government or third party payor reimbursement; limited research and development efforts and dependence upon third parties; and risks related to failure to obtain U.S Food and Drug Administration clearances or approvals and noncompliance with its regulations. As with any pharmaceutical under development, there are significant risks in the development, regulatory approval and commercialization of new products. The forward-looking statements in this presentation are made as of the date of this presentation, even if subsequently made available by the Company on its website or otherwise. Tonix does not undertake an obligation to update or revise any forward-looking statement, except as required by law. Investors should read the risk factors set forth in the Annual Report on Form 10-K for the year ended December 31, 2015, as filed with the Securities and Exchange Commission (the "SEC") on March 3, 2016, and future periodic reports filed with the SEC on or after the date hereof. All of the Company's forward-looking statements are expressly qualified by all such risk factors and other cautionary statements.

Developing innovative medicines for large and growing markets

3

- **Targeting two common central nervous system disorders**
 - One clinical-stage proprietary candidate targeting two indications
 - Differentiated product with potential for sustainable competitive advantages
- **Fibromyalgia – Phase 3 trial to report in September 2016**
 - TNX-102 SL 2.8 mg was active in a Phase 2b study of fibromyalgia
 - Central pain disorder
 - Phase 3 study (AFFIRM) clinical phase completed
- **Post-traumatic stress disorder (PTSD) – Phase 2 trial reported May 2016**
 - TNX-102 SL 5.6 mg was active in treating military-related PTSD
 - Serious mental health problem¹
 - Planning Phase 3 program in military-related PTSD
- **All intellectual property owned by Tonix**

¹Schnurr, PP et al., *Contemporary Clinical Trials* 2015;41:75.

TNX-102 SL (cyclobenzaprine HCl sublingual tablets), 2.8 mg is an Investigational New Drug and is not approved for any indication.

Pipeline led by TNX-102 SL for fibromyalgia

Candidate	Indication	Preclinical	Phase 1	Phase 2	Phase 3	NDA	Market	Near-term Catalyst
TNX-102 SL 2.8 mg (Tonmya®*)	Fibromyalgia							Topline data September 2016
TNX-102 SL 5.6 mg	Post-Traumatic Stress Disorder							Phase 3 starting 1Q 2017

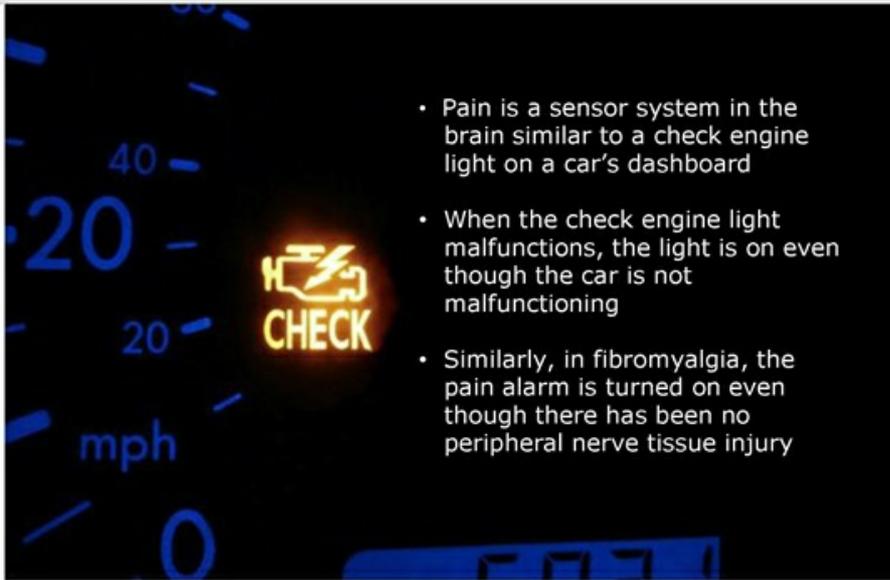

* Tonmya® has been conditionally accepted by the FDA as the proposed tradename of TNX-102 SL for fibromyalgia.

NDA = New Drug Application; FDA = U.S. Food and Drug Administration.

Concept: Fibromyalgia is inappropriate central pain signaling in the absence of peripheral injury

5

- Pain is a sensor system in the brain similar to a check engine light on a car's dashboard
- When the check engine light malfunctions, the light is on even though the car is not malfunctioning
- Similarly, in fibromyalgia, the pain alarm is turned on even though there has been no peripheral nerve tissue injury

PHARMACEUTICALS

Fibromyalgia is a chronic, debilitating disorder that imposes a significant societal and economic burden

6

- **Fibromyalgia is considered neurobiological disorder characterized by¹:**
 - Chronic widespread pain
 - Nonrestorative sleep
 - Fatigue
 - Diminished cognition
- **Believed to result from amplified sensory and pain signaling in central nervous system¹**
- **Causes significant impairment in all areas of life²**
 - Lower levels of health-related quality of life – reduced daily functioning
 - Interference with work (loss of productivity, disability)
- **Inflicts substantial strain on the healthcare system**
 - Average patient has 20 physician office visits per year³
 - Annual direct medical costs are twice those for non-fibromyalgia individuals⁴

¹Phillips K & Clauw DJ, *Best Pract Res Clin Rheumatol* 2011;25:141.

²Schaefer et al., *Pain Pract*, 2015.

³Robinson et al, *Pain Medicine* 2013;14:1400.

⁴White et al, *J Occupational Environ Med* 2008;50:13.

Fibromyalgia is a prevalent disorder but remains underdiagnosed

7

Estimated that >22 million prescriptions are issued for the treatment of fibromyalgia (on- and off-label usage) each year^{2,3}

- **1.1% diagnosis rate = 2.7 million U.S. adults¹**
 - Suggests under-diagnosis
- **Approximately 2.3 million U.S. adults receive treatment²**
- **Approved drugs achieved 2014 U.S. sales of \$1.2 billion³**
 - Represent about 5.6 million prescriptions⁴

¹Lawrence et al, *Arthritis Rheum* 2008;58:26; Vincent et al, *Arthritis Care Res* 2013;65:786; Jones et al, *Arthritis Rheum* 2015;67:568; U.S. Census Bureau, 2013 Projection.

²Robinson RL et al, *Pain Med* 2012;13:1366.

³Product sales derived from IMS MIDAS; IMS NDTI used to factor usage for fibromyalgia; data accessed April 2015.

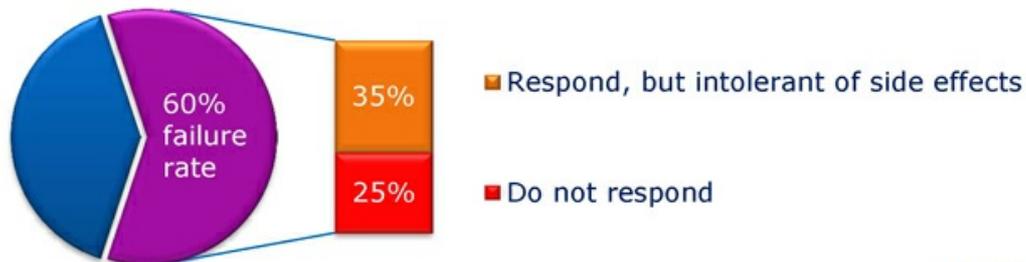

⁴Independent study conducted by IMS Consulting Group, April 2015 using IMS MIDAS (ex-manufacturing price), factored for fibromyalgia based on IMS National Disease and Therapeutic Index (NDTI).

Fewer than half of those treated for fibromyalgia receive sustained benefit from the three currently marketed drugs

8

- **The treatment objective is to restore functionality and quality of life by broadly improving symptoms while avoiding significant side effects**
- The majority fail therapy due to **lack of a response** or **poor tolerability**¹

Treated Population

¹Market research by Frost & Sullivan, commissioned by Tonix (2011).

TONIX
PHARMACEUTICALS

Large need for new fibromyalgia therapies that provide broad symptom improvement with better tolerability

9

- **Currently-approved medications may have side effects that limit long-term use¹**
 - Many patients skip doses or discontinue altogether within months of treatment initiation
- **Medication-related side effects may be similar to fibromyalgia symptoms**
- **High rates of discontinuation, switching and augmentation**
 - Attempt to treat multiple symptoms and/or avoid intolerable side effects
 - Average of 2-3 medications used simultaneously²
 - The typical patient has tried six different medications³
- **Substantial off-label use of narcotic painkillers and prescription sleep aids³**

¹Nuesch et al, *Ann Rheum Dis* 2013;72:955-62.

³"Patient Trends: Fibromyalgia", *Decision Resources*, 2011.

Tonix is developing TNX-102 SL for fibromyalgia

10

- **Advanced sublingual tablet containing low-dose cyclobenzaprine (CBP)**
 - Designed for daily bedtime administration with no titration
 - Efficient transmucosal absorption
 - Avoidance of first-pass metabolism reduces formation of long-lived metabolite
- **TNX-102 SL's pharmacologic action is believed to improve sleep quality**
 - Non-restorative sleep is a common clinical and diagnostic feature of fibromyalgia¹
 - Evolving understanding of the role of sleep in pain control and fibromyalgia development²
 - TNX-102 SL targets receptors believed to play key roles in sleep physiology
- **Phase 2b "BESTFIT" study was successfully completed in 3Q14**
- **Topline data from ongoing Phase 3 "AFFIRM" study expected to report in September 2016**

¹Swick TJ, *Ther Adv Musculoskel Dis* 2011;3:167-178.

²Choy EH, *Nat Rev Rheumatol*; 2015: 11:513-520.

Phase 2b “BESTFIT” study of TNX-102 SL in fibromyalgia

11

- **BESTFIT = Bedtime Sublingual TNX-102 SL as Fibromyalgia Intervention Therapy**
 - Randomized, double-blind, placebo-controlled trial
 - 2010 American College of Rheumatology diagnostic criteria for fibromyalgia
 - 205 participants randomized 1:1 at 17 U.S. sites
 - Sublingual tablet of TNX-102 SL 2.8 mg or placebo daily at bedtime for 12 weeks
 - Evaluated measures of pain, sleep quality, and other assessments of fibromyalgia

BESTFIT results on key clinical endpoints

12

Category	Endpoint – week 12 ¹	p value
Pain Relief	30% responder analysis ²	0.033
Sleep Quality	PROMIS Sleep Disturbance	0.005
Overall response to therapy	PGIC	0.025
Assessment of disease impact	FIQ-R Total score	0.014

p < 0.05 → statistically significant

BESTFIT pre-specified primary endpoint:
change in week 12 mean pain score
(p=0.172)

- PROMIS = Patient-Reported Outcomes Measurement Information System
- PGIC = Patient Global Impression of Change
- FIQ-R = Fibromyalgia Impact Questionnaire - Revised

¹Intent-to-treat analysis, N=205 (TNX-102 SL N=103, placebo N=102).

²FDA-accepted primary endpoint in current Phase 3 AFFIRM study.

Source: Phase 2b BESTFIT study data.

TNX-102 SL safety and tolerability profile in the BESTFIT study

13

- **No serious adverse events (SAE) reported with TNX-102 SL**
- **Systemic adverse events reported by at least 3% of the total BESTFIT population**

	TNX-102 SL (N=103)	Placebo (N=101)	Total (N=204)
Somnolence	1.9	6.9	4.4
Dry Mouth	3.9	4.0	3.9
Back Pain	4.9	3.0	3.9
Nausea	4.9	2.0	3.4
Sinusitis	3.9	3.0	3.4

- **Most frequent local adverse events were administration site reactions**
 - Previously reported in Phase 1 studies; no detectable bias on efficacy results
 - Transient tongue numbness (44% TNX-102 SL vs. 2% placebo)
 - Abnormal taste (8% TNX-102 SL vs. 0% placebo)
- **Trial completion rates of 86% with TNX-102 SL vs. 83% with placebo**

TONIX
PHARMACEUTICALS

Clinical phase completed in Phase 3 trial of TNX-102 SL for fibromyalgia

14

- Phase 3 AFFIRM study is fully enrolled
 - TNX-102 SL once-daily at bedtime**
2.8 mg $N \approx 259$
 - Placebo once-daily at bedtime**
 $N \approx 259$
 - Randomized, double-blind, placebo-controlled study in fibromyalgia
 - N=519; 35 U.S. clinical sites
 - Primary efficacy endpoint:**
 - Difference in 30% pain responder analysis at Week 12 between TNX-102 SL and placebo
- Timeline: **12 weeks** (solid arrow) followed by **open-label extension** (dotted arrow).
- Topline data expected September 2016**
- Second Phase 3 Study ("RE-AFFIRM") enrollment initiated in July 2016
 - Expected to be similar to AFFIRM in design and sample size

TNX-102 SL in Phase 2 development for PTSD

Candidate	Indication	Preclinical	Phase 1	Phase 2	Phase 3	NDA	Market	Near-term Catalyst
TNX-102 SL (<i>Tonmya</i> ®*) 2.8 mg	Fibromyalgia							Topline data September 2016
TNX-102 SL 5.6 mg	Post-Traumatic Stress Disorder							Phase 3 Starting 1Q 2017

* *Tonmya*® has been conditionally accepted by the FDA as the proposed tradename of TNX-102 SL for fibromyalgia.

PTSD is a chronic stress disorder triggered by a traumatic event

16

- **PTSD is characterized by:**
 - re-experiencing the triggering event
 - negative alterations in mood/cognition
 - situation/stimulus avoidance
 - hyperarousal (anxiety, agitation & sleep disturbance)
- **Considered a stress response, but prolonged and does not resolve with time**
 - 20% of women and 8% of men who experience significant trauma develop PTSD¹
- **Associated with significant life disruption**
 - Social isolation, inability to maintain employment, loss of independent living
 - Unpredictable acts of violence, suicidal thoughts

¹ Kessler et al, *Arch Gen Psychiatry* 1995;52:1048.

PTSD is a prevalent problem for both civilians and the military

17

- **~70% are considered to have moderate to severe symptoms**
- **Of those diagnosed, ~50% utilize professional healthcare (psychotherapy/pharmacotherapy)²**

- **Higher prevalence in military population**

- 20% of veterans from recent conflicts will have potential/provisional PTSD³
- ~638,000 veterans with PTSD in the VA health system (2012)⁴
- Majority are male
- Alcohol and substance abuse are common

¹Kessler RC et al, *Arch Gen Psychiatry* 2013;62:617; U.S. Census Bureau, 2013 Projection.

²Wang et al, *Arch Gen Psychiatry* 2005;62:629.

³Report on VA Facility Specific Operation Enduring Freedom (OEF), Operation Iraqi Freedom (OIF), and Operation New Dawn (OND) Veterans Diagnosed with Potential or Provisional PTSD.

⁴Bowe et al, *J Dual Diagnosis* 2015;11:22.

Limitations of current FDA-approved pharmacotherapies for military-related PTSD

18

- **No treatment response observed in U.S. military population**
 - Sertraline: negative large multicenter trial in U.S. military veterans¹
 - Placebo numerically superior on CAPS-2
 - Paroxetine: not studied in military population
- **Inconsistent treatment response observed in males**
 - Sertraline: FDA-conducted post-hoc analysis concluded no effect for male civilian subgroup²
 - Paroxetine: no gender-related difference in treatment outcome³
- **Important tolerability issues with SSRIs in this population**
 - Sexual dysfunction
 - Insomnia

SSRI: Selective Serotonin Reuptake Inhibitor.

TNX-102 SL at bedtime once-daily

5.6 mg

N= 49

Placebo at bedtime once-daily

N= 92

- Randomized, double-blind, placebo-controlled trial in military-related PTSD
- Analysis from 231 patients; 24 U.S. clinical sites
- **Primary efficacy endpoint:**
 - Difference in Clinician-Administered PTSD Scale (CAPS) score between TNX-102 SL 2.8 mg and placebo at week 12

12 weeks →open-label extension

TNX-102 SL was active at 5.6 mg dose

AtEase Study

- Randomized, double-blind, placebo-controlled trial
- DSM-5 diagnostic criteria for PTSD
- 231 participants studied 2:1:2 at 24 U.S. sites
 - 1 x TNX-102 SL 2.8 mg: 2 x TNX-102 SL 2.8 mg: placebo
- Evaluated CAPS-5 as primary endpoint
 - Pre-specified primary analysis was 2.8 mg dose

Key Demographics / Characteristics of AtEase

- 93% of the sample was male
- 98% had trauma during military service and were deployed on average 2.3 times
- Mean time since index trauma was 7 years
- Race and ethnicity generally consistent with U.S. military distribution
- Similar baseline CAPS-5 scores and MADRS scores across treatment arms
 - Average CAPS-5 scores were greater than 39 for all groups ('severe' PTSD*)

AtEase results on key clinical endpoints

TNX-102 SL 5.6 mg subgroup compared to placebo

22

Category	Endpoint – week 12 ¹	p value
PTSD Symptoms	CAPS-5 (MMRM with MI)	0.031
Global improvement	CGI-I	0.041
Arousal and reactivity	CAPS-5 cluster	0.048
Sleep Quality	CAPS-5 sleep	0.010

AtEase pre-specified primary analysis:
change from baseline at week 12 mean
CAPS-5 score on 2.8 mg (p=0.211)

p < 0.05 → statistically significant

- MMRM with MI: Mixed-effect Model Repeated Measures with Multiple Imputation
- CAPS-5: Clinician Administered PTSD Scale-5
- CGI-I: Clinician Global Impression- Improvement

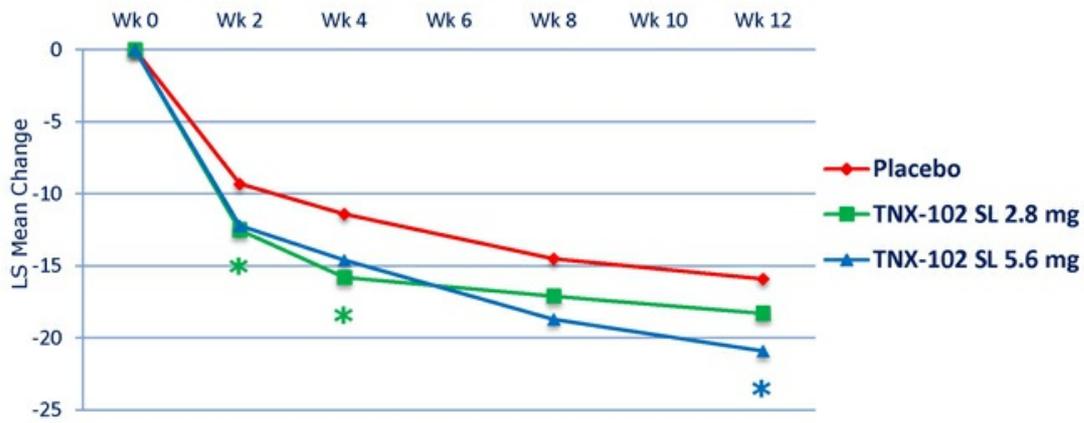

¹Intent-to-treat analysis, N=231 (TNX-102 SL 2.8 mg N=90, TNX-102 SL 5.6 mg N= 49, placebo N=92).

AtEase Study Results

Total CAPS-5 – Primary endpoint of Phase 3 program

23

CAPS-5 LS Total Score Mean Change from Baseline

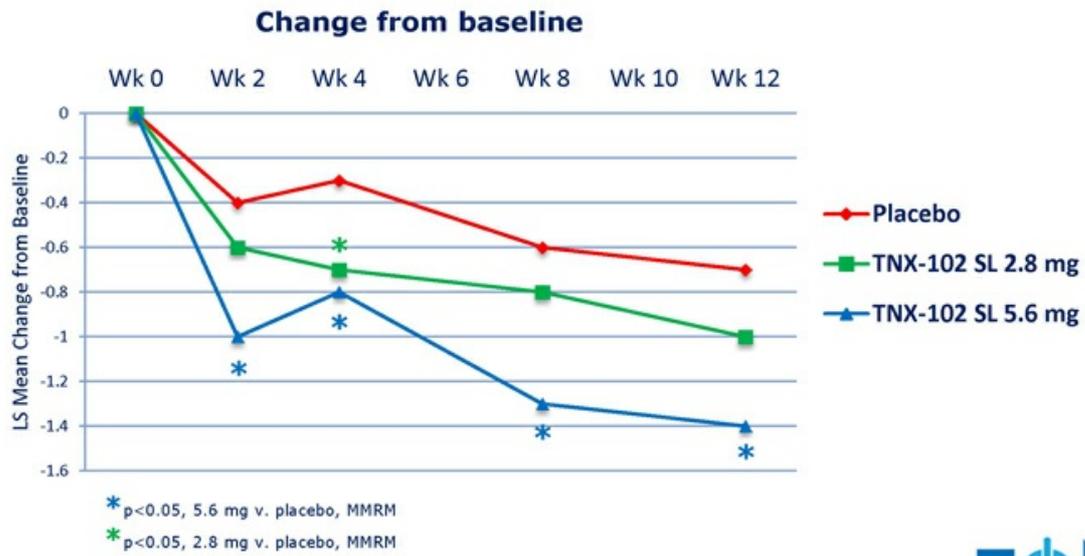

* $p=0.031$, comparing placebo and TNX-102 SL 5.6 mg, * $p<0.05$, comparing placebo and TNX-102 SL 2.8 mg, by MMRM with MI; LS Mean, least squares mean

AtEase Study Results

Responders

*p=0.041, Logistic regression comparing placebo and TNX-102 SL 5.6 mg
Responders are those rated as "much improved" or "very much improved"

TNX-102 SL safety and tolerability profile in the AtEase study

No serious adverse events reported with TNX-102 SL deemed related to treatment

27

Systemic Adverse Events*	Placebo (N=94)	TNX-102 SL 2.8 mg (N=93)	TNX-102 SL 5.6 mg (N=50)	Total TNX-102 SL (N=143)
Somnolence	6.4%	11.8%	16.0%	13.3%
Dry Mouth	10.6%	4.3%	16.0%	8.4%
Headache	4.3%	5.4%	12.0%	7.7%
Insomnia	8.5%	7.5%	6.0%	7.0%
Sedation	1.1%	2.2%	12.0%	5.6%
Administration Site Reactions*				
Hypoaesthesia oral	2.1%	38.7%	36.0%	37.8%
Paraesthesia	3.2%	16.1%	4.0%	11.9%
Glossodynia	1.1%	3.2%	6.0%	4.2%

Trial completion rates: 73% placebo; 79% TNX-102 SL 2.8 mg; 84% TNX-102 SL 5.6 mg

*at rates of >5% in either drug-treated arm

- **This is the first large, multicenter trial that demonstrated efficacy in a population with military-related PTSD**
 - Male predominant (93%)
 - Low incidence of co-morbid FM (7%)
 - Low incidence of current major depression (14%)
- **Early effects on sleep and hyperarousal are consistent with the mechanistic hypothesis of TNX-102 SL primary actions on sleep disturbance and autonomic balance**

Phase 3 program in PTSD being planned

29

Planning to repeat AtEase in military-related PTSD:

- Larger study
- Targeting start in 1Q 2017

TNX-102 SL once-daily at bedtime

5.6 mg $N \sim 250$

Placebo once-daily at bedtime

$N \sim 250$

12 weeks → open-label extension

General Study Characteristics:

- Randomized, double-blind, placebo-controlled study in PTSD
- $N \sim 500$; approximately 35 U.S. clinical sites

Primary Efficacy Endpoint:

- Difference in total CAPS-5 analysis at Week 12 between TNX-102 SL 5.6 mg and placebo

Topline data for Phase 3 in military-related PTSD study anticipated 1H 2018

TNX-102 SL

Fibromyalgia, PTSD

- **Composition-of-matter (eutectic)**
 - Patents filed
 - Protection expected to 2034
- **Pharmacokinetics (PK)**
 - Patents filed
 - Protection expected to 2033
- **Method-of-use**
 - Fibromyalgia: patents issued, 2020 expiry
 - PTSD: patents filed

- **Cyclobenzaprine is a tricyclic molecule that binds to a number of central nervous system (CNS) receptor types**

- **Highest affinity for three receptors believed to have a role in treating sleep disturbances**
 - 5-HT_{2A} receptor
 - α_1 adrenergic receptor
 - H₁ receptor

TNX-102 SL: Pharmacokinetic profile after sublingual route of administration

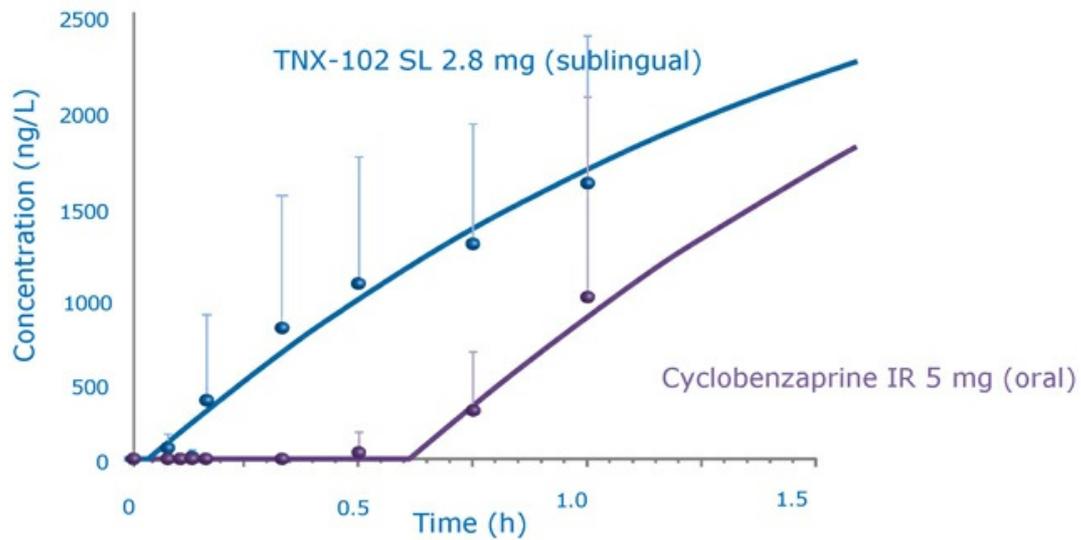

32

- **Very rapid absorption after dosing (measurable in plasma within 3 minutes of administration)**
 - Maintains T_{max} at ~4 hours after administration
 - Approximately 50% of exposure to cyclobenzaprine occurs during first 8 hours
- **Avoids first-pass hepatic metabolism to persistent metabolite, norcyclobenzaprine**
 - Large reduction in exposure to norcyclobenzaprine (-48% AUC_{0-48})
 - Should equally reduce both daytime and nighttime exposure to norcyclobenzaprine at steady-state
 - Decreased potential for adverse events

Cyclobenzaprine is detected in plasma within minutes following sublingual TNX-102 SL

Plasma Concentration Versus Time of TNX-102 SL Compared to oral Cyclobenzaprine IR

Somnolence and dry mouth with oral and sublingual cyclobenzaprine in fibromyalgia patients

34

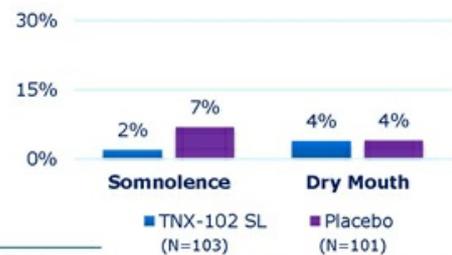

- **ORAL – Phase 2a¹:**

- Dose TNX-102 (CBP capsules, 1 mg)
- Dosing regimen
 - titrated from 1 mg to a range of 2 to 4 mg
 - average of 3.1 mg per day
 - Administered once daily for 8 weeks
 - Administered between dinner and bedtime

- **SUBLINGUAL – Phase 2b (BESTFIT)²:**

- Dose TNX-102 SL (CBP sublingual tablets, 2.8 mg)
- Dosing regimen
 - 2.8 mg per day
 - Administered once daily for 12 weeks
 - Administered at bedtime
